List of Contents

NUMBER 1

O. O. Onyejekwe	1	Adaptive body-fitted finite difference applications on an irregular domain
P. Prasad, R. Ravindran and **A. Sau**	5	The characteristic rule for shocks
L. Jódar	9	Explicit solutions of Riccati equations appearing in differential games
L. Brugnano and **D. Trigiante**	13	A full parallel preconditioner for a class of *M*-matrices
L. Jódar	17	Solving coupled Riccati matrix differential systems
K. Kitahara and **K. Tanaka**	21	A two decomposition of a bounded metric space
P. R. Parthasarathy and **N. Balakrishnan**	25	A continued fraction approximation of the modified Bessel function
J. C. Willems and **F. Lamnabhi-Lagarrigue**	29	A note on the linearization around an equilibrium
G. Caginalp and **G. B. Ermentrout**	35	Numerical studies of differential equations related to theoretical financial markets
H. E. Salzer	39	Interpolation by division
N. F. Britton	43	An integral for a reaction-diffusion systems
P. Cannarsa and **G. Da Prato**	49	A semigroup approach to Kolmogoroff equations in Hilbert spaces
C. Markett	53	Initial boundary value problems associated with a partial differential equation with two singular lines
E. K. Al-Hussaini	59	A characterization of the Burr type XII distribution
O. Yamamoto	63	The distribution of the zeros generated by length-bounded polynomials

A. G. Ramm and **E. I. Shifrin**	67	Asymptotics of the solution to a singularly perturbed integral equation
L. F. Shampine	71	Singular ODEs arising from the Laplacian and spherical symmetry
F. Poupaud	75	Derivation of a hydrodynamic system hierarchy for semiconductors from the Boltzmann equation
A. Tornambè	81	A feedback control law for nonlinear time lag systems
V. G. Dovì O. Paladino and **A. P. Reverberi**	87	Some remarks on the use of the inverse hessian matrix of the likelihood function in the estimation of statistical properties of parameters
P. Daripa	91	Using the grid spacing ratio as a continuous variable in one dimensional adaptive grid generation
A. Bounabat and **J.-P. Gauthier**	95	Weak stabilizability of infinite-dimensional nonlinear systems
C.-H. Huang, J. R. Johnson and **R. W. Johnson**	99	A report on the performance of an implementation of Strassen's algorithm

NUMBER 2

V. B. Kolmanovskij and **N. I. Koroleva**	1	Optimal control of bilinear hereditary systems of their applications
D. Golenko-Ginzberg	5	Metrics in the permutation space
B. Alidaee	9	Optimal assignment of slack due-date and sequencing in a single machine shop
L. Jodar and **E. Navarro**	13	Rectangular co-solutions of polynomial matrix equations and applications
L. Jodar and **E. Navarro**	17	A closed form solution for nonsymmetric Riccati differential equations with invertible quadratic coefficient
H. A. Donegan and **F. J. Dodd**	21	An analytical approach to consensus
T. Lu, P. Neittaanmaki and **X.-C. Tai**	25	A parallel splitting up method and its application to Navier-Stokes equations
P. Harker and **B. Xiao**	31	A polynomial-time algorithm for affine variational inequalities

J. Konvalina and **Y.-H. Liu**	35	Zero-one matrices without consecutive ones
A. Russo	39	Uniqueness results for a class of nonlinear problems
M. R. Osborne and **T. Prvan**	43	A direct derivation of the interpolation smoother
T. McGuire and **B. Childs**	45	An analysis of power series operators
B. N. Mandal	49	A note on the reflection coefficient for a class of water wave scattering problems
L. F. Shampine	53	Order selection in ODE codes based on implicit formulas
J. K. Uhlmann	57	Aesthetic sorting
G. P. Samanta	61	Stochastic analysis of a noisy oscillator
B. R. Feiring, T. C. E. Cheng and **C. R. Bector**	65	A note on probability assignments in estimating the time to solve linear programs
N. Toomarian and **J. Barhen**	69	Adjoint-operators and non-adiabatic learning algorithms in neural networks
M. Tismenetsky	75	A note on a block preconditioner
P. Schiavone	81	Uniqueness in dynamic problems of thin micropolar plates
J. A. Adam	85	Self-activation and inhibition: A simple nonlinear model
B. Wendroff	89	The stability of MacCormack's method for the scalar advection equation
S. Owa	93	Notes on *p*-valenty Bazilevic functions
G. Caginalp and **J. Jones**	97	A derivation of a phase field model with fluid properties

NUMBER 3

D. E. Bentil and **J. D. Murray**	1	Pattern selection in biological pattern formation mechanisms
S. Owa	7	Starlikeness of a certain integral
E. Comay	11	Stability problems of numerical solutions to the Lorentz-Dirac equation

J. Komornik, P. Rocha and **J. C. Willems**	15	Closed subspaces, polynomial operators in the shift, and ARMA representations
H. Steinrück and **F. Odeh**	21	The Wigner function for thermal equilibrium
V. Dahl	25	Incomplete types for logic databases
D. Serre	29	Points critiques de la pression d'un écoulement parfait incompressible 2-d
J. M. Rakotoson	31	A compactness result for quasilinear problems: Application to parabolic equations with measures as data
J. M. Rakotoson	35	A compactness lemma for elliptic problem with measures as data
J. Stephenson and **Y. Wang**	37	Relationships between the solutions of Feigenbaum's Equation
L. L. Bonilla, F. J. Higuera and **J. M. Vega**	41	Stability of stationary solutions of extended reaction-diffusion-convection equations on a finite segment
J. A. Adam	45	Self-activation and inhibition: The effect of a zero-flux boundary
A.-M. Wazwaz	49	Modified numerical methods based on arithmetic and geometric means
J. Stephenson and **Y. Wang**	53	Relationships between eigenfunctions associated with solutions of Feigenbaum's Equations
X. Ji	57	Numerical solution of joint eigenpairs of a family of commutative matrices
S. Wang	61	An existence theorem of a Pareto equilibrium
M. Ahues	65	A note on finite element error bounds for multiple defective eigenvalues and maximal invariant subspaces
A. Novick-Cohen and **L. A. Peletier**	69	The steady states of one dimensional Sivashinsky equations
M. Chen and **R. Temam**	73	The incremental unknown method I
M. Chen and **R. Temam**	77	The incremental unknown method II
Y. S. Wong and **X. Ji**	81	Monotone iterative techniques for mildly nonlinear differential equations

NUMBER 4

D. F. Bailey	1	Some binomial coefficient congruences
A. M. Khidr, N. S. Abdel-Hakim and A. H. Abd-Ellah	7	Matching of order statistics with intervals
R. U. Verma	11	The numerical range of nonlinear Banach space operators
R. P. Agarwal and **R. A. Usmani**	17	The formulation of invariant imbedding method to solve multipoint discrete boundary value problems
A. Cloot	23	Equidistributing mapping and spectral method for the computation on unbounded domains
B. N. Mandal and **P. G. Roy**	29	A Mehler-Fock type integral transform
J. F. Oehmke and **R. H. Oehmke**	33	The global stability of Walrasian *tâtonnement*
J. B. Hughes	37	A homomorphic transformation for eigenfunctions of the Sturm Liouville differential operator
J. J. Leader	41	Limit orbits of a power iteration for dominant eigenvalue problems
F. Flandoli	45	A stochastic reaction-diffusion equation with multiplicative noise
J. J. Leader	49	A weakly chaotic iteration in $\mathbb{R}^n$
P. C. Kainen	53	Upper bound for linear arboricity
X.-R. Cao and **D.-J. Ma**	57	Sensitivity analysis of general performance measures of queueing networks with state-dependent service rates
N. Boland, C. J. Goh and **A. I. Mees**	61	An algorithm for solving quadratic network flow problems
J. Levitan and **Z. Suchanecki**	65	A general method in evaluation of integrals for time-dependent perturbation of potential barrier
G. Adomian and **R. Rach**	69	Transformation of series
A. Debussche and **R. Temam**	73	Inertial manifolds and slow manifolds
A. G. Ramm	77	Solution of some integral equations arising in integral geometry

P. T. Kan	83	Nonstrictly hyperbolic conservation laws
J.-C. Yao	89	Applications of variational inequalities to nonlinear analysis
G. A. Kriegsmann	93	Optimal power absorption in lossy targets

NUMBER 5

Y. Wu	1	A note on the stability of two-level symplectic schemes
S. Y. Yan and **L. Naish**	7	Completeness of an improved declarative debugger
R. Ferré	13	Discrete convolution with modulo operations
L. Jódar	19	Stable solutions of discrete eigenvalue problems
B. Pourbabai	23	Approximating a class of superposition processes
L. Demkowicz	27	A note on symmetry boundary conditions in finite element methods
T. Inoue	31	A covering theorem about radial segments
J. D. Mei and **C. Tier**	35	Asymptotic analysis of multiple class queueing networks
D. Avis and **K. Fukuda**	39	A basis enumeration algorithm for linear systems with geometric applications
J.-P. Barthélemy, **F. R. McMorris** and **R. C. Powers**	43	Independence conditions for consensus n-trees revisited
W. Gautschi	47	On the paper "A continued fraction approximation of the modified Bessel function $I_1(t)$" by P. R. Parthasarathy and N. Balakrishnan
G. Mehta	53	Utility functions on preordered normed linear spaces
G. R. Waissi	57	Worst case behavior of the Dinic algorithm
J. K. Uhlmann	61	Metric Trees

T. Inoue	63	A remark on zeros of weighted Chebyshev polynomials
Z.-Q. Luo and **P. Tseng**	67	A decomposition property for a class of square matrices
R. U. Verma	71	Inner approximation-solvability of nonlinear equations
A. G. Ramm	75	An approximation problem
S. Owa	79	Some properties of certain multivalent functions
M. Glasner, D. Yevick and **B. Hermansson**	85	Computer generated generalized propagation techniques
M. H. Lee	91	Picard-Fuchs equations for elliptic modular varieties
E. Y. Rodin and **Y. Wu**	97	Neural networks with local memory for control systems

NUMBER 6

X. A. Chen and **W. X. Zhang**	1	Differential operator method for one-dimensional inverse scattering problems
O. M. Grasselli and **S. Longhi**	5	Invariant zeros of linear systems connected in series
C. Jeffries	11	A theory of electromagnetic and gravitational fields
S. Bertoluzza	17	Numerical computation of wavelet expansion: $W^{s,p}$ error estimate
B. Fuchssteiner	23	Filter automata admitting oscillating carrier waves
B. Codenotti, M. Leoncini and **G. Resta**	27	Parallel algebraic reductions among numerical problems
T. Villmann and **A. Schierwagen**	33	The symmetries of a nerve conduction equation
E. C. Cho	37	Pythagorean theorems on rectangular tetrahedron
P. C. Dauby and **G. Lebon**	39	Microscopic rheological models and Extended Irreversible Thermodynamics

S. V. Zybin	45	A parametric transformation at numerical integration of ODE
E. C. Cho	51	The generalized cross product and the volume of a simplex
A. W. M. Dress and **W. Wenzel**	55	A greedy-algorithm characterization of valuated Δ-matroids
D. Brochet and **D. Hilhorst**	59	Universal attractor and inertial sets for the phase field model
M. Cannone and **C. Cercignani**	63	A trace theorem in kinetic theory
R. P. Tewarson, H. Wang, J. L. Stephenson and **J. F. Jen**	69	Efficient solution of differential equations for kidney concentrating mechanism analyses
R. Verma and **L. Debnath**	73	Phi-pseudo-monotonicity and approximation-solvability of nonlinear equations
H. T. Siegelmann and **E. D. Sontag**	77	Turing computability with neural nets
G. Isac and **M. Kostreva**	81	Kneser's Theorem and the Multivalued Generalized Order Complementarity Problem
R. M. Pidatella	87	3-D Mixed Finite Element schemes for charge transport equations
S. Wang	91	A result on scalarization
G. P. Klimov	95	Homogeneous renewal equation
